

In the Specification:

Page 9, lines 14 to 18:

Figure 5A is a detailed view ~~taking~~ taken at A of Figure 5 with a first crimping ring partially advanced over the sleeve of the connector;

Figure 5B is a detailed view taken at B of Figure 5 of a second crimping ring partially advanced over the first crimping ring;

Page 20, line 23 through Page 21, line 14:

The second crimping ring 72 includes an annular body 88 having a forwardly tapered inner wall surface 90 between a relatively thick-walled portion 88 at its rearward end and a thin-walled leading end portion 92. The leading end 92 and inner tapered wall surface 90 are dimensioned to fit snugly over the trailing end 78 of the first crimping member 70 when assembled onto the connector 10. A circumferential groove 95 in the tapered wall surface 90 is adapted to receive the rib 84 on the first crimping member 70 to releasably connect the crimping rings 70 and 72 together when preassembled onto the connector 10, as best seen from Figure 5B. A second groove 96 is axially spaced from the first groove 95 to engage the rib 84 when the second crimping ring 72 is axially advanced over the first crimping ring 70 between the position shown in Figure 5 and that shown in Figure 6.
